

Coffee Break

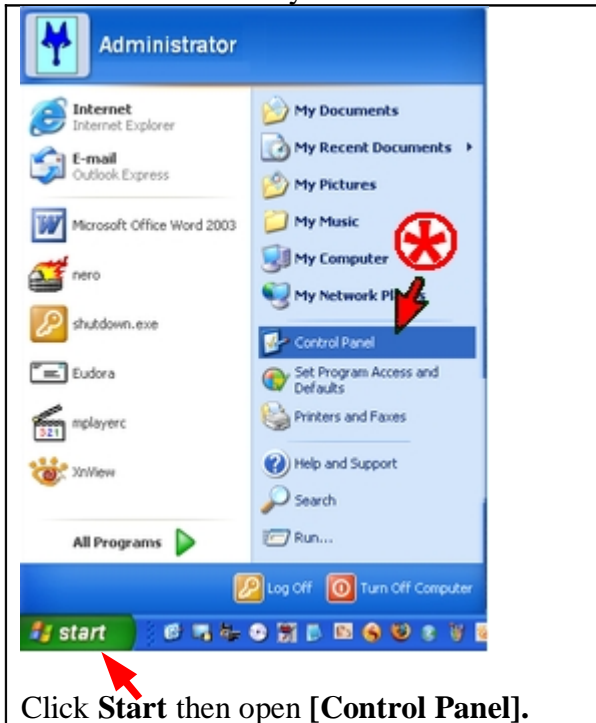

Question on Software or Operating system.

Find that Mouse Pointer.

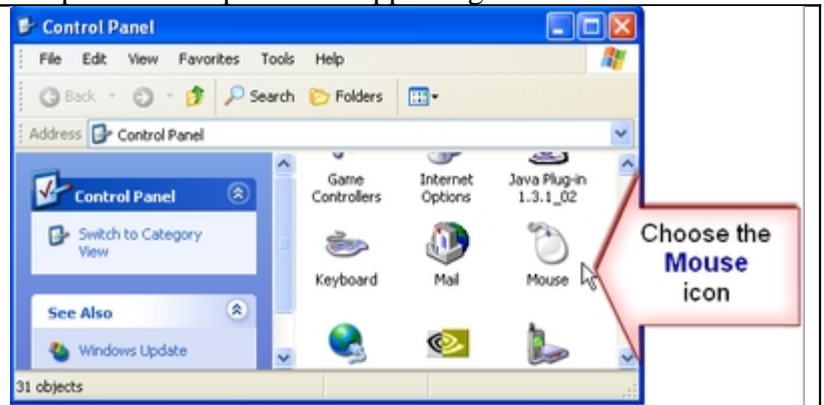

Have you ever lost the mouse pointer while working with a word processor?

Even when you move the mouse the pointer does not appear.

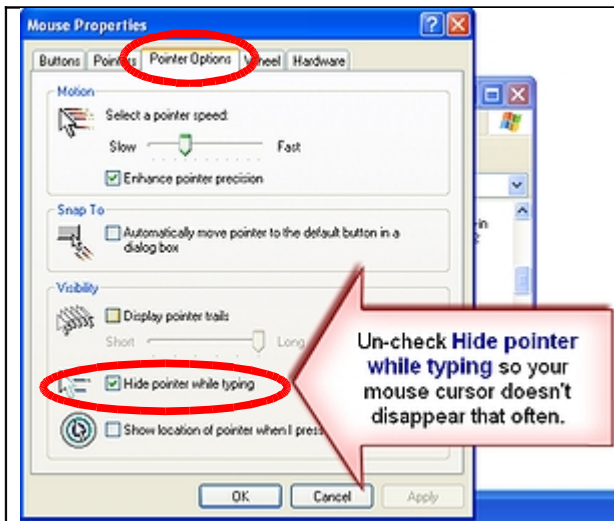

Here's a solution for you Windows XP users to stop the mouse pointer disappearing.

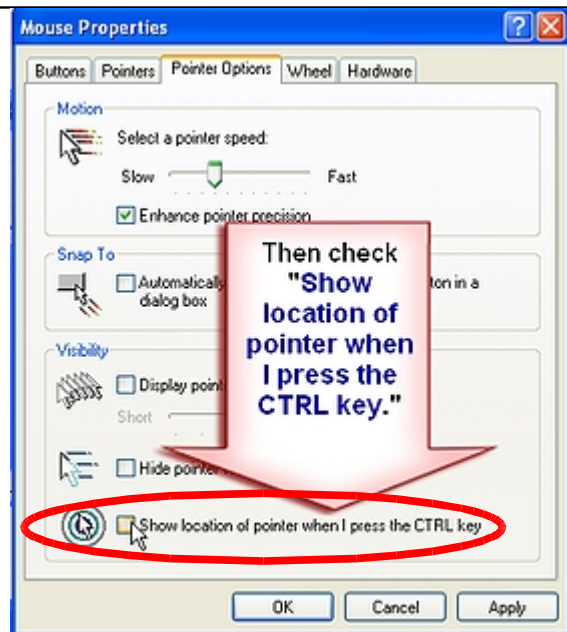

Click **Start** then open **[Control Panel]**.

In the control panel click the Mouse Icon.

Click **[Pointer Options]** then un-check **[Hide pointer while typing]**

Next place a check in **[Show location of pointer when I press the CTRL key]**. Click **[Apply]** then **OK**

When you press the CTRL key the mouse pointer will display the icon on the left. No more searching for the mouse cursor.
