Question on Software or Operating system.

On Screen Keyboard

On-Screen Keyboard is a utility that displays a virtual keyboard on the screen and allows users with mobility impairments to type data using the pointer of the mouse. On-Screen Keyboard is intended to provide a minimum level of functionality for users with mobility impairments.

On-Screen Keyboard has three typing modes you can use to type data:

- In clicking mode, you click the on-screen keys to type text.
- In scanning mode, On-Screen Keyboard continually scans the keyboard and highlights areas where you can type keyboard characters by pressing a hot key or using a switch-input device.
- In hovering mode, you use a mouse or joystick to point to a key for a predefined period of time, and the selected character is typed automatically.

How to open [On Screen Keyboard]?

1. On the Start menu:
2. Point to All Programs.
3. Point to Accessories.
4. Point to Accessibility.
5. Select On-Screen Keyboard.

Click on [Settings] and choose [Typing Mode]

Clicking [Hover to select] allows the user to hover the mouse pointer over the key required to make the selection. No need to press the mouse button or the key.
