Question on Software or Operating system.

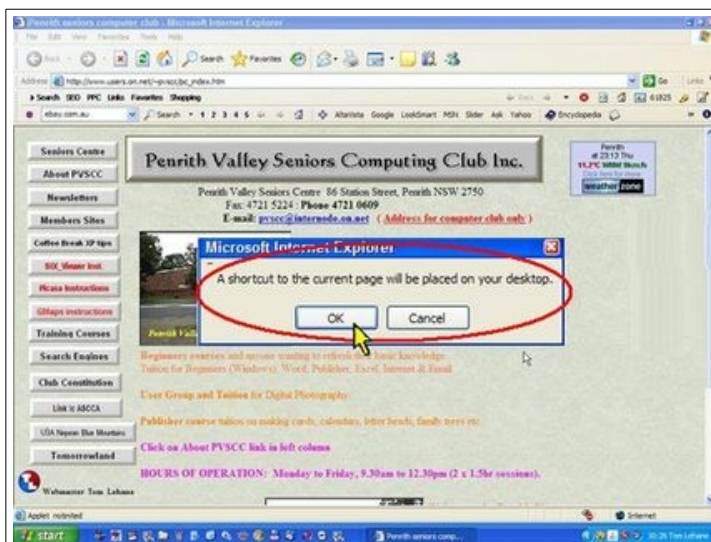

## Placing a shortcut web site on your desktop.

You may have a favorite web site that you visit quite often. Instead of opening Windows Explorer and having you home page open then clicking favorites to make your choice, you can make a shortcut on the desktop.

Right click on an area of the web page.

From the pop-up menu click [Create Shortcut].

Next a action prompt menu will appear. Click [OK].

Now you have a desktop shortcut for you regularly visited web site.
